

ContraPest® with Elevate Bait System™

1. MOUNT THE BAIT SYSTEM

- Mount bait system indoors on an elevated surface (e.g., walls, pipes, ledges, beams, etc.) where rats are actively traveling and will intercept bait.
- Always ensure that mounting bracket is fully secured and does not move side-to-side before adding ContraPest bottle.

A. TO SECURE ON A VERTICAL SURFACE

- Use attachment holes found on back of system to directly secure to vertical surface using nails, screws, zip ties, etc., or hang to stationary object using provided hooks.

NOTE: It is recommended to place a secondary container under the bait system when using hooks.

B. TO SECURE ON A HORIZONTAL SURFACE

- Attach legs to back of system using provided “L” brackets and screws (one screw per bracket) into either row of lower attachment holes for desired height.
- Firmly secure “L” brackets to horizontal surface using field-supplied clamps, screws, zip ties, or similar so the bait system cannot be knocked over.

2. DEPLOY CONTRAPEST®

- Remove cap and seal from bottle, then attach the nozzle. Invert the bottle and slide into the mounted system.
- Remove the stopper covering the end of the nozzle.

3. MONITOR

- Add additional Elevate Bait Systems if ContraPest bottle is emptied between service visits to ensure a constant supply.
- If consumption is repeatedly low or ceases, try relocating the system to a different location.

4. MAINTAIN

- Replace ContraPest bottle monthly or more frequently as needed if consumption is high for optimal performance.
- To remove bottle for replacement, pull from top or push up from underneath and dispose of empty bottle in trash.

NOTE: If any bait remains, invert bottle to remove nozzle, then recap using replacement bottle cap before disposing.

- Repeat Step 2 to re-deploy ContraPest.
