

ContraPest® Deployment Process

01

PLACE STATIONS

- Best baiting locations are where rats are known to be feeding on site (ex: dumpsters, animal feed, loose trash, etc.)
- In addition, utilize areas where previous baiting has been successful (keep bait stations at least 30 feet away from lethal methods).

02

DEPLOY CONTRAPEST

- Place one (1) ContraPest tank and tray in the station(s) in either the left or right side.

ContraPest® is registered federally as a General Use Product when used as directed. However, in some states, due to applicator expertise, it is a Restricted Use Product. Please check with your local state regulatory agency to determine restriction status. Read and follow all label instructions for target species Norway and roof rats.

*PROTECTA EVO EXPRESS® is a registered trademark of Bell Laboratories, Inc. and SenesTech is not related or affiliated with Bell Laboratories, Inc.

ContraPest® Deployment Process

MONITOR

- To ensure a constant supply is available to the rats, add a second ContraPest tank and tray to stations when 50% or more of the tank has been consumed in between monthly tank replacements.
- If consumption is repeatedly low or ceases, try relocating the bait station to a different location as rats may migrate.

MAINTAIN

- Replace ContraPest trays monthly, or as often as needed to retain optimum flow of bait.

Each site is unique, this process may need to be altered as you see fit. Contact our Customer Success team for additional strategies that will make your deployment successful by emailing at customer.success@senestech.com or call:
