Application Directions

Please read and comply with all label instructions.

Place bait station on a firm, level surface in an area of rat activity. Maintain an uninterrupted supply of bait in bait stations. Keep filled bait station clean, dry and on a level surface. Check bait stations and replace bait insert as necessary, or at least every 30 days. Properly dispose of any leftover bait, as instructed in the Storage and Disposal section of this label.

Installing Bait Inserts in Bait Stations:

To use new bait insert (tank and feeder tray):

- 1 Remove cap, keeping the opening down, screw tank onto tray while keeping it level. Do not overtighten.
- 2 The flow of liquid should begin immediately. Do not squeeze tank to encourage flow of bait.
- 3 Place insert into the appropriate side of the bait station (R or L).

To reuse feeder tray with new tank:

- 1 Remove insert (tank and tray) from bait station. Keep insert level to limit spills.
- 2 Slowly rotate insert away from you, as indicated by arrow on top of the tank, until feeder tray is on top.
- 3 Hold insert in this position for approximately 5 seconds to ensure all bait flows back into tank.
- 4 Unscrew feeder tray from tank and flip tray over until it is in upright position.
- 5 Remove cap on the new tank and keeping the opening down, screw the tank onto the tray. Do not overtighten.
- 6 The flow of liquid should begin immediately. Do not squeeze tank.
- 7 Place insert into the appropriate side of the bait station (R or L).
- 8 Screw new tank cap onto old tank and dispose in trash.

ContraPest®

ContraPest is a liquid rodent fertility control bait that targets the reproductive capacity of both male and female, Norway and roof rats. As a part of your Integrated Pest Management (IPM) plan, it can help bring rat populations down and keep them down.

ContraPest has been registered in all 50 states and Washington D.C.
